First steps and Description

First steps and Description of the Owner-Pilot Billing System

- Description

Description

This system allows billing management between an aircraft owner and a pilot who wants to lease an aircraft.

The platform supports two different payment methods:

Standard / Manual Payments

Payments are managed directly by the aircraft owner.
The system includes organizational tools to keep track of upcoming payments and billing schedules.

The owner is responsible for:

- Managing and recording payments in the system
- Monitoring payment status
- Using the built-in calendar and template system
- Editing installments and lease fees
- Adding extra charges or custom fees
- Marking payments as pending or completed

The system also supports Discord webhooks, allowing the owner to receive automatic payment notifications and reminders.

Payments Using the FSE Payment Gateway

With the FSE Payment Gateway, FSELeaseHub handles payment processing on behalf of the owner.

Our team manages payment operations and transfers funds on scheduled payout dates, including a management commission fee.

The system generates a unique payment ID for each pending payment, allowing pilots to complete payments easily using that ID.
